

JNCRADIO 80-METER COIL FOR MC-750

<https://chelegance.com/products/80-meter-coil-for-mc-750/>

1-1. DESCRIPTION & SPECIFICATION

This is a new low band coil which performs on frequencies to 3.5-4.0 MHz.

This coil is a special accessory designed specifically for the MC-750, and has been carefully designed and tested to ensure perfect compatibility with the MC-750 and provide reliable performance to ensure a stable and efficient HF communication experience.

It is manufactured with high quality copper wire for excellent conductivity and signal transmission quality.

Meanwhile, this antenna coil is abrasion-resistant and durable for extended outdoor use.

It is also portable, making it suitable for a variety of outdoor activities and emergency communication needs.

Product size	50*50*100mm
Product weight	250g
Supported Band	80m / 3.5-3.9MHz

1-2. PART LIST

- 1× 80M COIL

1-3. INSTALLATION GUIDE

During the installation process, please make sure that the coil is installed in the correct position so as not to affect the usage effect.

- Choose a suitable location and install a tripod to place the MC-750 antenna base.
- First connect the antenna arm to the antenna base, then we install the radials on the bottom of the MC-750 as well.
- The original MC-750 is configured with a 7Mhz coil, we need to replace the MC-750 7Mhz coil with the 80m coil in the original location.
- Finally connect them to the whip and the installation is complete and ready to go.

-Correct order of combination-

When using the 80M coil, a VNA is recommended and the specific length of the antenna needs to be adjusted to the frequency range observed by the VNA.

***NOTE**

1. The two different frequency coils, 7MHz and 80M, cannot be used in combination and are only supported for use on the MC-750 alone.
2. And depending on the setting or weather of the setup, there may be some variations in actuality and slight adjustments will be required.

1-4. RECOMMENDATIONS ON ACCESSORIES

Can only be used with MC-750.
