

## **EXTERNAL MEMORY KEYBOARD FOR YAESU RADIOS**

<https://chelegance.com/products/cntou-external-memory-keyboard-for-icom-yaesu/>

### **1-1. DESCRIPTION & SPECIFICATION**

The External Memory Keypad consists of a control keypad and a 1m cable.

The YAESU Keypad offers five memories for pre-recorded messages in different operating modes. FT891, 991A, FTDX10, FTDX101MP

This is especially useful in contests, but can also be used for any CQ call or other standard text.

These memories are available for CW, RTTY and SSB, and can normally be recalled via the touch screen. However, since you usually want to display something else on the screen, this extension offers the possibility to recall the eight memories with an external keyboard. This makes it much easier to run a contest or work through a pile-up.

Product Name	YAESU External Memory Keypad
Product weight	50g
Size	44*18*69 mm + 1m cable
Storage Channel	5
Support Mode	SSB/CW/RTTY

## 1-2. PART LIST

- 1×External Memory YAESU Keypad
- 1×3.5mm cable

## 1-3. INSTALLATION GUIDE

- Plug the 3.5mm cable into the keypad connector and the other end into the jack of the external keyboard on the back of the radio.

- There are 1-5 channels available.

- Press the "MEM" button in the lower right corner and the 'REC' will flash on the screen. Then press and hold the #1 storage button, then press the PTT button to record the first audio. and the 'REC' disappears to indicate that the recording is complete.

- Or click on 'message' to display all five pieces of audio.

- Same thing in CW mode, click on MEM and then press the storage channel you need to edit.

\*You need to set BK-IN in the setup to on to actually send it out in CW mode.
